

**PRESENTATION ABSTRACT****Presentation topic: The thermoforming advantage for high moisture barrier blister packaging****Speaker:**

Daniel Nott

**Company:**

Honeywell Belgium N.V.

Honeywell is a leading supplier of packaging films for pharmaceutical blister packaging. Honeywell's Aclar® film locks out moisture by providing up to ten times the barrier protection of other transparent films. Aclar film has packaged some of the biggest blockbuster drugs in protective blisters. Needs for moisture barrier solutions such as Aclar laminates are increasing due to the globalization of the pharma industry, the increasing sensitivity of new pharmaceutical products and the increased use of novel formulations. As pharmaceutical companies increase their exports and innovations for domestic customers Aclar provides another option to meet ICH stability standards and offer innovative thermoformed packages.

In this presentation Honeywell will lead the audience through the following agenda points:

- Brief introduction to Honeywell
- Aclar film and laminate properties
- Comparison of moisture barrier of various thermoforming laminates
- Operational benefits of high barrier thermoforming laminates
- User benefits of high barrier thermoforming laminates
- Recommendations on using and running high barrier thermoforming laminates

With this innovation, Helvoet Pharma has fused its Omniflex fluorinated polymer coating together with its ultra-clean FM457 compound to form the latest major advancement in rubber closure technology.
