

PRESENTATION ABSTRACT

Presentation topic: Innovative pharmaceutical packaging materials of Sealed Air

Speaker:

Olga Lanshina
Sales Manager Russia / CIS

Company:

Sealed Air

- Sealed Air Company announces about forming of special medical business unit in the frames of Sealed Air Corporation, called Sealed Air Medical Applications.
- The following products are included into new business unit:
 - Brand NEXCEL combining flexible materials for primary package of parenteral solutions and for medical devices' packaging.
 - Brand NELIPAK combining rigid trays and blisters as well as blister sealing machines for medical devices.
- The containers for parenteral solutions made of NEXCEL materials (formerly CRYOVAC) having the comparable cost with other types of primary packaging are distinguished by the whole line of advantages: manufacturing of multi-chamber bags, safety of clinical application in any conditions, optimal cost of transportation and storage
- Flexible materials for packaging of medical devices NEXCEL are intended for utilization in thermoforming equipment, have excellent optic and mechanic properties, suitable for different types of sterilisation.
- Rigid trays and blisters NELIPAK are customised and suitable for any medical devices, even of very complex configuration. Such packaging maintains absolute integrity and sterility of the medical device till its utilisation in surgery room. The blister sealing machines NELIPAK are also customised.
- OOO «Sealed Air» (Moscow office of Sealed Air Corporation) realises supply of materials NEXCEL and NELIPAK as well as assists the customers in consulting, promotion and technical support in utilisation of these materials.
