

PRESENTATION ABSTRACT

Presentation topic: Polyplasdone[®], More Than Just an Excellent Tablet Disintegrant

Speaker:

Dr. Tyurina Olga, Pharma Sales Engineer

Company:

ISP, USA

Presentation abstract:

In today's competitive environment, everyone is looking for rapid, high quality, low cost formulation development and manufacturing to increase utilization of standard tableting process equipment and profitability. Multidimensional excipients that benefit more than one product, process and/or quality attribute can help.

In this half an hour seminar you will find a chance to learn why more and more pharmaceutical companies make Polyplasdone[®] their first-choice in disintegration technology! Compared to other disintegrants, this multidimensional excipient is **more than just an excellent tablet disintegrant** and can speed formulation development by providing the highest performance and highest probability of success the first time. Thus, by starting with Polyplasdone[®] your formulations and production processes are more robust and your formulation development times are shortened.

Topics to be covered:

- Disintegrant chemistry and morphology
- Effect of Polyplasdone[®] on solubility enhancement of poorly soluble drugs
